

perma SELECT APP

Application oriented calculation tool for relubrication

NEW

An easy-to-use calculation tool

perma SELECT APP calculates the required lubricant amount and discharge setting for your perma lubrication system based on your entry of existing operating conditions.

The perma SELECT APP can be easily installed on all common iOS and Android mobile devices. A browser version is also available. *

Use your mobile system as a platform for optimized lubrication with perma lubrication systems.

* Online costs charged by your internet service provider must be paid by the user. Download and use of the software is free of charge.

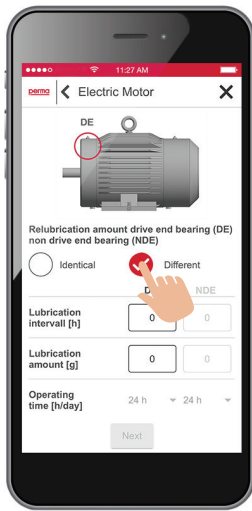

Lubrication point requirements

Optimal lubrication with the right lubricant and the right amount is one of the most important maintenance tasks. Wrong dosage can lead to costly unscheduled equipment downtimes.

Calculating the right relubrication amount is therefore an important factor for uninterrupted operation and an active contribution to economic success.

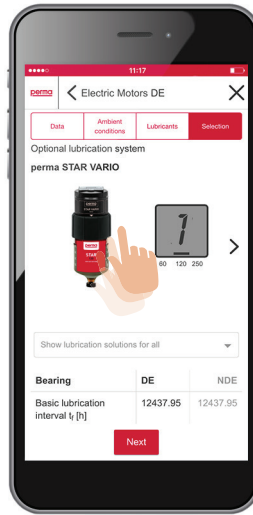

3 simple steps to the ideal solution

Data entry

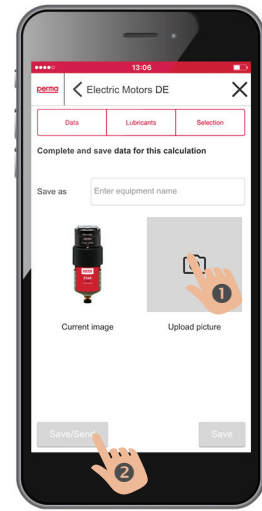

Calculation is based on the entry of **bearing- or application data**.

Recommendation

The software will recommend the **most suitable lubrication system**, the ideal lubricant and the right discharge period.

Selection / Solution

Take a picture of the application and **email** the **saved** calculation results.

Start now!

Selection

Select the **best calculation method**.

Setting

Activate lubrication system with recommended settings.

Installation

Install lubrication system on application.
