

perma CONNECT

The convenient solution for remote lubrication point management

Simple and intuitive - configure and maintain all perma Bluetooth lubrication systems via mobile devices

- perma lubrication systems in hard-to-reach or dangerous areas can easily and reliably be monitored from a distance
- Changing the discharge period or triggering additional discharges (PURGE) is possible at any time during operation
- The app reports error messages, such as overpressure and an empty LC
- Switch perma lubrication systems on and off on your mobile device
- Localise lubrication systems via a signal
- Display the lubricator history
- The app ensures clear management and easy maintenance of all lubrication points that are equipped with Bluetooth lubrication systems
- In connection with the web application, all details about your lubrication points are conveniently also available at your workplace

Why perma CONNECT?

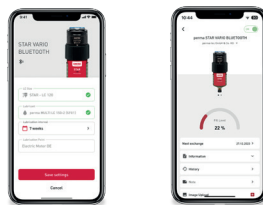

BLUETOOTH CONNECTION

Remote connection

- » Configure, control, maintain & analyse via Bluetooth

REMOTE CONTROL

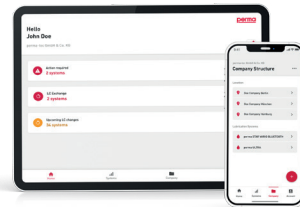

Remote configuration

- » No direct access necessary
- » Configuration can always be adapted

Start / Stop a PURGE via Bluetooth

- » Clearing of blockages in grease lines possible for several lubrication points

REMOTE MAINTENANCE

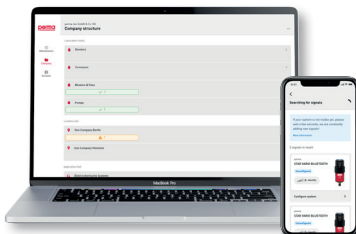

Increased workplace safety

- » Safe access to lubrication system during running operation
- » Distance up to 30 m possible depending on ambient conditions

Current status is automatically provided

- » Latest data provided whenever the device is in range

REMOTE MONITORING

Information is synchronised with web application

- » Information can be viewed at the desktop
- » Less maintenance runs

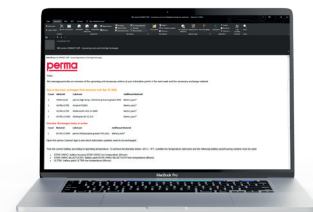

DIGITALISATION OF NON-BLUETOOTH LUBRICATION SYSTEMS

Overview of all lubrication systems in the app & web application

- » Scheduled exchange of empty lubrication systems
- » Information provided via QR-code

NOTIFICATION VIA E-MAIL

Notification of required actions

- » Scheduled maintenance runs
- » Details about required exchange material

Interaction of web application and app

Registration is possible via app or web application

User data is stored in perma CONNECT database

Information about the lubrication point is stored both in the app and web application

Company structure | User management | Lubrication system & associated information

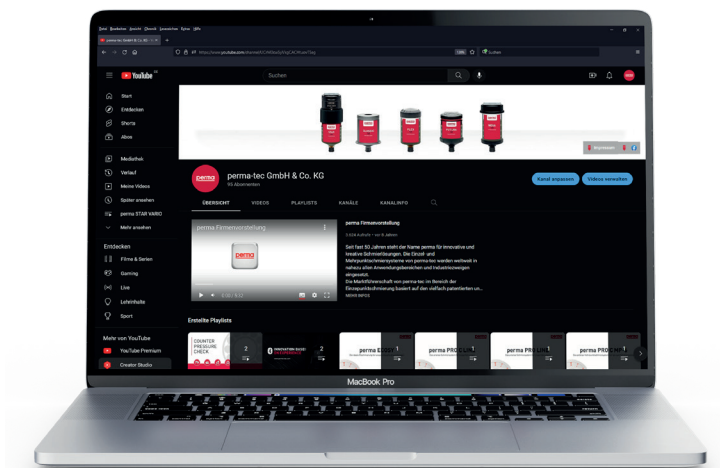

Direct interaction with perma Bluetooth lubrication systems is only possible via the app

For any changes, an existing connection to the lubrication system is required

Information and actions

- Status
- Lubrication system
- Configuration
- Lubricant
- Exchange information
- Ambient information
- History
- Troubleshooting

Can be changed via the app (when connected to the lubrication system)

Find a variety of videos on the perma YouTube channel to get a deeper understanding of the perma CONNECT app.
